

Lamar Dunn & Associates
ENGINEERING EXCELLENCE

With an innovative approach to business, a commitment to state-of-the-art technology, and a dedicated staff of professionals focused on customer service, the engineering firm of Lamar Dunn & Associates, Inc. is making its mark in eastern Tennessee and around the world

Designing and implementing unique solutions for its clients has been the hallmark of the company since Lamar Dunn established the business in 1982.

“I was working as the executive vice-president of an international engineering firm at the time and decided I wanted to start my own business where I could be close to my clients,” Dunn states. “Locating in the Knoxville area allowed me to do this.”

LD&A now maintains offices in Johnson City, Knoxville and, through the acquisition of an existing engineering firm, has had a presence in Chattanooga for more than half a century. That presence continues to grow. LD&A recently completed the rehabilitation of a sewer line in Warner Park along with numerous flood studies and streetscapes for the City of Chattanooga.

During the course of its history, LD&A has provided an array of engineering services typically available only through much larger firms.

Working as a “trusted advisor” to its clients, the firm provides personalized, comprehensive solutions from vision to implementation and operation in a number of engineering services including:

- water treatment
- water distribution
- wastewater treatment
- wastewater collection
- unding assistance
- civil engineering
- storm water management
- permitting
- program management
- environmental

The firm’s reputation for quality has now spread far beyond eastern Tennessee. LD&A has worked with clients in countries around the world, including Saudi Arabia, Iraq, Korea, Canada, China, and Nepal. Projects include industrial waste treatment facilities in Korea and Canada. LD&A teamed with a Saudi consultant to design an upgrade and expansion of wastewater treatment and a re-use facility for

the second industrial city of Riyadh, Saudi Arabia. LD&A professionals were consulted on roadway, water, and land-fill projects in Iraq. Lamar Dunn was invited by the China National Association of Consulting Engineers to attend an engineering conference at the construction site of the Three Gorges Dam in China in 2001.

“Whether it’s a project around the corner in Chattanooga or around the world, our vision is to provide superior service with exemplary results through our com-

mitted application of engineering and science principles in the worldwide marketplace,” Dunn notes. “I believe it has been our innovative thinking, along with the initiative to provide the services of a large business with the personal attention to detail of a small company, that have been the cornerstones of our success. Each of our thirty associates brings the integrity and innovation on which this company was founded to each project we undertake. Our goal is to enhance the quality of life by creating professional and practical solutions to all the challenges confronting our clients.”
